Gray Water Treatment Systems

Gray Water Systems

Gray Water Treatment Systems

Graywater is the portion of household wastewater that doesn't contain black water. Graywater treatment refers to the process of treating water from showers, sinks, and bathtubs for reuse. It can be recycled by incorporating it into the

graywater discharged from laundries. By treating graywater, we can obtain water for domestic use that isn't of drinking quality.

Water recycled by grey water treatment systems can be used in toilet cisterns, general cleaning works and garden irrigation.

Gray Water Treatment System Features

- Chlorine Dosing Units
- Grill
- Sand Filter
- Activated Carbon Filters
- UF Modules
- Filtered Water Tank and Feed Pump
- Backwash Tank and Pump
- Final Chlorine Dosing Unit
- PLC Control Unit
